NEW DUO OF ELO TOUCHSYSTEMS ALL-IN-ONE TOUCHCOMPUTERS EXPANDS INTERACTIVE CHOICES FOR HEALTHCARE AND BUSINESS

-- The New Touchcomputers Add 19- and 22-Inch Widescreen Models with UL60601, IEC60601 Certifications and IPX1 to the Elo Portfolio --

HARRISBURG, PA. – August 24, 2011 – TE Connectivity today announced the addition of two new products to its portfolio of medical-friendly solutions: the Elo TouchSystems [19CM](#) and [22CM](#) touchcomputers. Measuring 19-inches (19CM) and 22-inches (22CM) these all-in-one (AiO) systems complement the recently introduced [2400LM](#) (24-inch) touchmonitor to round out the [Elo TouchSystems](#) family of devices built to help support the unique needs of medical environments and touch applications. Both the 19CM and 22CM meet UL60601-1 and IEC60601-1 certifications and have an IPX1 drip-proof rating. In addition, these AiO units feature a LED backlight for lower power consumption and heat generation, a slimmer profile with brighter images and higher contrast than the CCFL (cold cathode fluorescent light) backlights commonly used in most commercial systems.

Similar to the [2400LM](#), and [1919LM](#) touchmonitors, the CM series represents efficient, performance-driven and cost-effective solutions for System Integrators, Value-Added Resellers and Software Developers to consider integrating into their healthcare applications such as nursing stations, computer-aided therapy, electronic medical record keeping, paperless charting, patient self check-in/registration or point-of-information installations. Each model is available with the choice of three durable and reliable touchscreen technologies: iTouch zero-bezel surface acoustic wave, IntelliTouch surface acoustic wave or AccuTouch five-wire resistive touchscreens.

For applications like point-of-care, mobile medical carts and point-of-service, the 19CM and 22CM touchcomputers feature high quality display panels with wide-viewing angles and a high contrast ratio for exceptional screen clarity and contrast – even in the brightest environments. Both models are compliant with

multiple safety and electrical certifications, including EN 60601-1 for safety and, EN55022, EN55024, and EN 60601-1-2 for EMC. In addition, both the 19CM and 22CM are RoHS compliant, and include an enclosure design that is resistant to dripping water with an IPX1 rating, protecting the unit from liquid drops and spills. The two models are also available in white only, preferred for the aesthetics of healthcare environments.

Additional features include a USB/Serial combination touch controller, DVI, VGA and built-in speakers. Models also come equipped with a removable base and mounting features, including a VESA mount as well as wall- and arm-mounting options, providing installation flexibility for almost any architectural configuration. Power and monitor control functions can be locked-out to prevent tampering and speakers are built-in to enrich the audio experience.

The new 19CM and 22CM touchcomputers combine precision TE touchscreen product technology with commercial-grade, high quality LCD panels and are backed by a three-year warranty and 40 years of Elo TouchSystems experience. The new Elo TouchSystems 19CM and 22CM touchcomputers will be available in North America and Europe August 24, 2011.

More information about the new Elo TouchSystems 19CM and 22CM touchcomputers can be found at:
